Jochy Tower

Jochy Tower is a mixed-use concept at the meeting point of the city and the open steppe. Offices, a hotel, housing, and commercial spaces are brought together in a tower whose terraces and planting draw on the movement of wind and water.

A canal links the tower to squares, promenades, and green spaces, with traffic kept at the perimeter. A landscaped podium connects the building to this public network; a mosque and the Seven Heavenly Gardens form a quiet crown above.

Eternal Pearls

Eternal Pearls is an urban sculpture proposal for Al Khobar, inspired by the Arabian Gulf's pearl-diving heritage. A wave-like landscape holds three pearls of increasing size, forming a sequence from the shoreline toward the city.

The pearls represent past, present, and future: maritime roots, contemporary growth, and future ambition. Curved depressions and elevated pathways bring visitors into the composition, allowing the sculpture to be experienced through movement and changing viewpoints.

Semey Mall

Semey Mall is an adaptive-reuse concept combining a retained brick industrial shell with new glass-and-steel volumes. Retail, leisure, and business spaces are arranged around courtyards and pedestrian routes, connecting the buildings with a shared public realm.

Transparent façades and clearly defined entrances guide visitors through the complex. Service and vehicle routes remain at the perimeter, while a flexible planning framework allows internal spaces to adapt to changing uses over time.

Urban Block

Urban Block is an academic proposal to transform a shopping-centre site between Šnipiškės and Šeškinė in Vilnius into a mixed-use quarter. Housing, workplaces, and civic uses surround green courtyards and pedestrian routes.

Perimeter buildings shelter quieter residential spaces from traffic, while an X-shaped pedestrian network connects the courtyards to a central gathering space. Underground parking frees the ground for public use; planted façades, rainwater collection, and solar installations extend the environmental strategy.
